Global B2B Consultancy.

Employee monitoring and compliance

CUSTOMER

Global B2B Consultancy Inc. is a leading service provider delivering outsourced services to online gaming sites. Being one of Asia's industry leaders, the company manages and develops bespoke e-commerce solutions for both new and existing operators - helping them excel in this highly competitive industry.

CHALLENGE

Just like any other service providers, Global B2B Consultancy must comply with industry regulations, as well as observe corporate policy rules.

Unfortunately, the company had no solution providing complete visibility of what employees are actually doing with sensitive customer data once they access it. This fact dramatically increased risk of data breaches and compliance violations.

SOLUTION

After validating several security monitoring products, Global B2B Consultancy has chosen Ekran System for employee audit and regulatory compliance purposes, as it allows recording everything that takes place on all user screens: terminals, local PCs, and virtual machines, being easy-to-use and affordable at the same time.

In addition, native Ekran System Clients guarantee minimal resource usage (memory, CPU, etc.) on the investigated computers. Thus, performing security monitoring without impact into working process allowed Global B2B Consultancy to keep the quality of delivered services at the highest level.

“In order to comply with regulations and corporate policy rules, we wanted to ensure uninterrupted privileged user audit, as well as provide local and remote employee activity monitoring,” stated Kelvin Goh, Managing Partner at Global B2B Consultancy. ***“That’s why we have chosen Ekran System, easy-to-use and affordable solution, which met our expectations in full measure.”***
